PROJECTS

Trust App

A platform that connects users with registered trusts for seamless food donations. Developed core features such as user registration, trust management, and real-time notifications. Built using React.js, Node.js, and MongoDB,Express.js with an intuitive matching system to align donations with trust requirements.

YouTube video Search App

YouTube video search app using the YouTube Data API.Users can search for videos, view metadata and click thumbnails to watch on YouTube. It features a clean, ad-free interface with smooth pagination via a "Load More" button. The layout is inspired by YouTube's video cards, optimized for mobile responsiveness.
